

GapVax[®]

AUGER SYSTEMS

Compared to other off-loading systems, the GapVax Auger System are easy to operate, simple to maintain, less expensive, and modular. The Auger Systems are powered through the body hydraulic system. When vacuuming is completed, the operator positions the truck near the drum, roll-off, super sack, etc. and engages the hydraulics. As the body is raised, the auger quickly unloads the collected material.

Vertical Auger System

Dump Chute Auger System

Vertical Auger System

Unload Solids, liquids, and slurries into drums, bags, and open roll-off containers.
